

Student Parliament rating of amendments of curriculum and timetable of exams

After a thorough review of the book of subjects that contains descriptions of all subjects, teachers and timetable of exams by years, in consultation with older students who attended subjects under the old program, the Student Parliament of Mechanical Engineering Faculty, University of Niš, made the following conclusion:

Primarily, students of Mechanical Engineering Faculty are pleased that with the new program of accreditation Mechanical Engineering Faculty transferred studies from program 3 + 2 to 4 + 1, which includes four years of undergraduate studies and provides future students that after completing undergraduate studies choose one of the five study programs of the master studies. This also provides the opportunity for students, who wish, to complete more study programs at master studies. We are also of the opinion that the timetable of subjects that is changed is more suitable for students and will allow them to study easier.

Introduction of a new study program to the master studies of Engineering Management studies entitled "Innovation Management and Product Development", received very positive feedback. Students are especially pleased that this study program will provide students with the knowledge that also can be acquired on the well-known European Universities, and so to provide our students the competitiveness with their colleagues from Europe.
